AB - J06345898 A resin compsn. for moulding materials comprises (A) 10-60 wt.% of a polyfunctional dihydrobenzoxazine cpd. of formula (I), (B) 5-70 wt.% of glass or organic fibres and (C) 0.5-80 wt.% of at least one of inorganic fillers, curing accelerators, releasants, adhesion-imparting agents and colourants: n = 1-4; R1 = phenyl, substd. phenyl, methyl or cyclohexyl; R2 = -O-, -CH2-, -C-CH, -SO2- and gps. of formulae (II)-(XIV); m is at least 1.  
- Also claimed are mouldings obt'd. by curing the compsns..  
- USE/ADVANTAGE - The resin compsns. are useful for mouldings such as for electric parts. The resin compsns. can give mouldings with good balance among mechanical and electric properties and fire retardancy not attained by phenolic, melamine or urea resins, good appearance and less die strain and do not generate volatile components on curing.
